EDUCATION

UNIVERSITY OF CALIFORNIA, SAN DIEGO

Bachelor of Science in Computer Science, GPA: 3.6/4.0

September 2025 – December 2027

Relevant Coursework: Database System Principles, Systems Programming, Artificial Intelligence, Machine Learning Algorithms

SADDLEBACK COLLEGE & IRVINE VALLEY COLLEGE

Associate of Science in Computer Science, GPA: 3.8/4.0

August 2022 – June 2025

EXPERIENCE

AESTHETIC

Remote

Software Engineering Intern

January 2026 – April 2026

- Built a serverless Gmail ingestion pipeline on AWS Lambda (OAuth, incremental sync, orchestration, S3 storage) to extract structured purchase data from retailer emails and surface products directly in-app.
- Developed a product-image extraction pipeline combining domain filtering, heuristic image scoring, deduplication, and Gemini Vision validation to identify wearable fashion products from shopping emails.
- Built an evaluation harness benchmarking 5 image-generation models across 26 product photos with automated HTML/CSV scoring reports, selecting the model used for lay-flat product imagery.
- Improved the recommendation and visual-search retrieval system with bounding-box ranking, category-aware similarity sorting, and intelligent backfill, while building a mobile-optimized, dynamically themed product carousel.

ARITY

Remote

Machine Learning Project Fellow | Classification of Vehicle Turns Using Telematics Data | [GitHub](#)

August 2025 – December 2025

- Cleaned and engineered features from 60,000+ iOS and Android telematics events, turning raw GPS and sensor fields into structured modeling variables for vehicle-turn analysis.
- Built and evaluated 12+ K-Means, DBSCAN, and HDBSCAN workflows using scaling, PCA, silhouette analysis, and geospatial visualization, identifying a 3-cluster K-Means model that separates 90° turns, U-turns, and lane changes across platforms.
- Led a 6-person team through sprint planning, model review, and milestone delivery with Arity stakeholders, translating cluster outputs into interpretable turn-behavior labels.

PROJECTS

Miniplayer: macOS Now-Playing Widget - Swift, SwiftUI, XCUITest | [GitHub](#)

July 2026

- Built a native always-on-top macOS playback widget in Swift/SwiftUI that drives Spotify and Apple Music over an AppleScript bridge, with automatic source switching and four interchangeable skins.
- Implemented the Spotify OAuth flow end to end, including a hand-written loopback HTTP callback server, a persistent token store with refresh handling, and a typed Web API client for queue data AppleScript cannot expose.
- Abstracted media control behind a protocol with an injectable fake, enabling 58 unit tests and 3 XCUITest end-to-end smoke tests gated in GitHub Actions CI.

SE-Sitrep: Agile Team Manager - JavaScript, Supabase, Playwright | Class Project Winner | [GitHub](#)

April – June 2026

- Led a 10-person team shipping a full-stack Agile engineering platform - standup dashboard, blocker tracking, GitHub activity sync, calendar views, and AI-agent activity monitoring.
- Refactored the initial frontend skeleton into a modular architecture, including dashboard layout, shared state/selectors, feature modules, and navigation, leveraging AI tooling (Claude Design) to compress the prototyping loop.
- Designed and implemented Postgres foundation with schema/RLS, join-code team onboarding, auth gating, static-client integration, and a shared db.js data layer replacing mock state.

CareFi: AI Dermatology Web Service - Next.js, TypeScript, Tailwind | Best Coast Hackathon Winner | [GitHub](#)

November 2025

- Built the three-angle facial photo workflow with guided reference imagery, drag-and-drop uploads, duplicate detection, preview generation, and client-side validation.
- Engineered cross-batch duplicate detection and resilient file-state handling, preventing rejected files from generating previews while preserving re-selection of removed images.
- Developed checkout and onboarding functionality with payment input formatting, four-field validation, bidirectional budget validation, and progression gating.

SKILLS & CERTIFICATIONS

Languages: Python, C++, C, Java, TypeScript, JavaScript, SQL, Swift

Frameworks & Web: React, React Native/Expo, Next.js, Node.js, SwiftUI, HTML, CSS, Tailwind

Cloud, Data & Systems: AWS (Lambda, S3), Supabase/Postgres, REST APIs, OAuth 2.0, POSIX/Unix, GitHub API

AI & ML: Gemini Vision, Scikit-learn, Pandas, NumPy, Claude Code/Claude Design

Testing & Tools: Vitest, Playwright, XCUITest, ESLint, Git, GitHub Actions, CI/CD

Certifications: Break Through Tech AI, Cornell Tech: Machine Learning Foundations – August 2025
